

# 12.INSPIRE ESPUS školenie „INSPIRE validácia“

Intro do INSPIRE validácie

MINISTERSTVO

ŽIVOTNÉHO PROSTREDIA  
SLOVENSKEJ REPUBLIKY

ESPUS

Efektívna správa priestorových údajov a služieb

# 12. INSPIRE ESPUS školenie „INSPIRE validácia“ Intro do INSPIRE validácie

18.11.2022

**Európska únia**  
Európsky sociálny fond

# Prehľad

## INSPIRE validácia

- Legislatívne požiadavky
- Technické odporúčania

## Úroveň validácie

- ATS, ETS

## Predmet validácie

- metaúdaje
- služby
- interoperabilita
- linkovanie

**ESPUS**

Efektívna správa priestorových údajov a služieb

## INSPIRE validácia

# INSPIRE validácia

- neexistuje presná definícia v legislatíve
- účelom je overenie súladu s požiadavkami smernice INSPIRE
- hodnotenie stavu implementácie smernice INSPIRE

# INSPIRE validácia - legislatívne požiadavky

- neexistuje samostatná legislatíva pre požiadavky validácie
- vyžaduje sa zabezpečenie súladu s jednotlivými implementačnými pravidlami pre oblasti
  - Metaúdaje
    - Nariadenie 1205/2008
  - Sieťové služby
    - Nariadenie 976/2009
  - Súbory priestorových údajov
    - Nariadenie 1089/2010

# INSPIRE validácia - legislatívne požiadavky

- VYKONÁVACIE ROZHODNUTIE KOMISIE (EÚ) 2019/1372 zo 19. augusta 2019, ktorým sa vykonáva smernica Európskeho parlamentu a Rady 2007/2/ES, pokiaľ ide o monitorovanie a podávanie správ
  - Článok 4 - Monitorovanie súladu metaúdajov s nariadením Komisie (ES) č. 1205/2008
  - Článok 5 - Monitorovanie súladu súborov priestorových údajov s nariadením Komisie (EÚ) č. 1089/2010 o interoperabilite
  - Článok 7 - Monitorovanie súladu sieťových služieb s nariadením (ES) č. 976/2009

# INSPIRE validácia - technické požiadavky

- Legislatívne nezáväznú požiadavky na úrovni Technických návodov INSPIRE pre jednotlivé oblasti

**TG Requirement 1.1: metadata/2.0/req/datasets-and-series/resource-type**

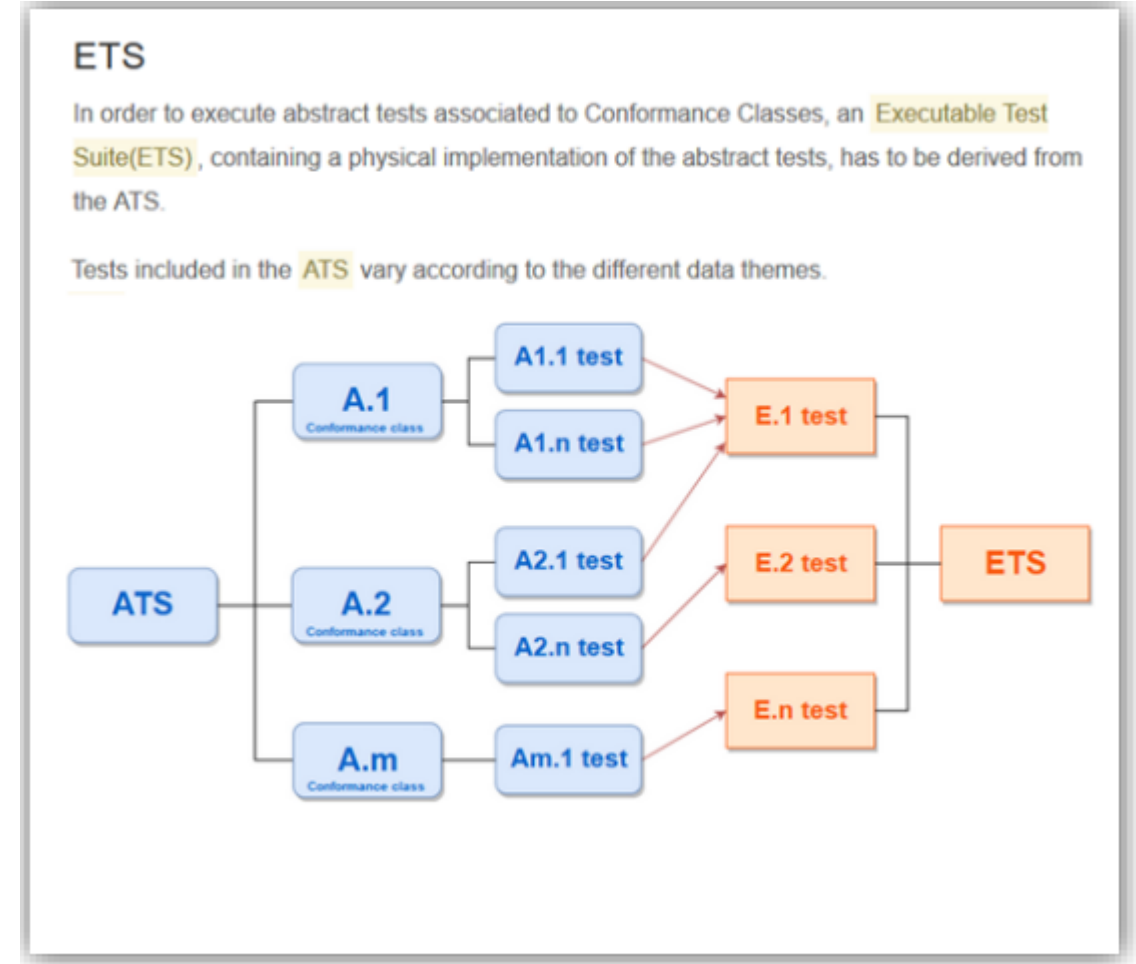

The resource type shall be declared as "dataset" or "series" using the first *gmd:hierarchyLevel* child element of *gmd:MD\_Metadata*. The *gmd:hierarchyLevel* shall contain a *gmd:MD\_ScopeCode* element<sup>32</sup>.

**Implementation Requirement 6** The `<inspire_common:MetadataURL>` element within the extended INSPIRE capabilities of an **[ISO 19128]** – WMS 1.3.0 `<wms:Capability>` element shall be used to reference the INSPIRE service metadata available through an INSPIRE Discovery Service. Mandatory **[ISO 19128]** – WMS 1.3.0 metadata elements shall be mapped to INSPIRE metadata elements to implement a consistent interface.

# INSPIRE validácia - ATS

- Abstract test suite
- Abstraktná množina testov, na báze ktorých sa testuje súlad
- Generická základná množina testov
- Testy sú spájané do tzv. conformance classes
- ATS je definované pre všetky oblasti implementácie INSPIRE
- ANNEX A tech. návodov

# INSPIRE validácia - ATS metaúdaje

## A.1 ATS: Metadata for INSPIRE datasets and data set series

### A.1.1 Conformance Class 1: Baseline metadata for data sets and data set series

This section contains test cases covering all the TG Requirements of Conformance Class 1: INSPIRE data sets and data set series baseline metadata (<http://inspire.ec.europa.eu/id/ats/metadata/2.0/datasets-and-series>).

### A.1.2 Conformance Class 2: Interoperability metadata for data sets and data set series

This section contains test cases covering all the TG Requirements of Conformance Class 2: INSPIRE data sets and data set series interoperability metadata (<http://inspire.ec.europa.eu/id/ats/metadata/2.0/isdss>).

Req#	Description	Covered by test(s)	IR reference(s)
C.1	XML Schema	<a href="#">xml-schema</a>	
C.2	Root Element	<a href="#">root-element</a>

# INSPIRE validácia - ATS metaúdaje

## A.2 ATS: Metadata for INSPIRE Spatial Data Services

### A.2.1 Conformance Class 3: Baseline metadata for Spatial Data Services

This section contains test cases covering all the TG Requirements of Conformance Class 3: INSPIRE Spatial Data Service baseline metadata (<http://inspire.ec.europa.eu/id/ats/metadata/2.0/sds>).

### A.2.2 Conformance Class 4: Metadata for INSPIRE Network Services

This section contains test cases covering all the TG Requirements of Conformance Class 4: INSPIRE Network Services metadata (<http://inspire.ec.europa.eu/id/ats/metadata/2.0/ns>).

### A.2.3 Conformance Class 5: Metadata for Invocable Spatial Data Services

This section contains test cases covering all the TG Requirements of Conformance Class 5: INSPIRE Invocable Spatial Data Services metadata (<http://inspire.ec.europa.eu/id/ats/metadata/2.0/sds-invocable>).

### A.2.4 Conformance Class 6: Metadata for Interoperable Spatial Data Services

This section contains test cases covering all the TG Requirements of Conformance Class 6: INSPIRE Interoperable Spatial Data Services metadata (<http://inspire.ec.europa.eu/id/ats/metadata/2.0/sds-interoperable>).

### A.2.5 Conformance Class 7: Metadata for Harmonised Spatial Data Services

This section contains test cases covering all the TG Requirements of Conformance Class 7: INSPIRE Harmonised Spatial Data Services metadata (<http://inspire.ec.europa.eu/id/ats/metadata/2.0/sds-harmonised>).

Req#	Description	Covered by test(s)
3.1	Resource Type	<a href="#">resource-type</a>
3.2	Service Identification Element	<a href="#">service-identification-element</a>
3.3	Spatial Resolution	<a href="#">spatial-resolution</a>
3.4	Spatial Data Service Category	<a href="#">sds-category</a>
3.5	Spatial Data Service Type	<a href="#">sds-type</a>
3.6	Linking to Provided Data Sets Using Coupled Resource	<a href="#">coupled-resource</a>
3.7	Resource Locator for Services	<a href="#">resource-locator</a>
3.8	Data Quality Info Section	<a href="#">only-one-dq-element</a>

Req#	Description	Covered by test(s)
4.1	Spatial Data Service Type	<a href="#">sds-type</a>

Req#	Description	Covered by test(s)
5.1	Spatial Data Service Type	<a href="#">sds-type</a>
5.2	Resource Locator Access Point	<a href="#">access-point</a>
5.3	Data Quality Conformity	<a href="#">conformity</a>
5.4	Spatial Data Service Category	<a href="#">sds-category</a>
5.5	Conformity to Technical Specifications	<a href="#">conformity-to-technical-specifications</a>

Req#	Description	Covered by test(s)
6.1	Coordinate Reference System Identifier	<a href="#">crs</a>
6.2	CRS http URIs	<a href="#">crs-http-uris</a>
6.3	Conditions Applying to Access and Use	<a href="#">conditions-applying-to-access-and-use</a>
6.4	Responsible Party	<a href="#">responsible-party</a>
6.5	Quality of Service	<a href="#">quality-of-service</a>

Req#	Description	Covered by test(s)
7.1	Invocation Metadata	<a href="#">invocation-metadata</a>
7.2	Operation Metadata	<a href="#">operation-metadata</a>
7.3	Operation Metadata Parameters	<a href="#">operation-metadata-parameters</a>

# INSPIRE validácia - ATS datasety A1

## A.1.1 Schema element denomination test

a) **Purpose:** Verification whether each element of the dataset under inspection carries a name specified in the target application schema(s).

b) **Reference:** Art. 3 and Art.4 of Commission Regulation No 1089/2010

c) **Test Method:** Examine whether the corresponding elements of the source schema (spatial object types, data types, attributes, association roles, code lists, and enumerations) are mapped to the target schema with the correct designation of mnemonic names.

**NOTE** Further technical information is in the Feature catalogue and UML diagram of the application schema(s) in section 5.2.

## A.1.2 Value type test

a) **Purpose:** Verification whether all attributes or association roles use the corresponding value types specified in the application schema(s).

b) **Reference:** Art. 3, Art.4, Art.6(1), Art.6(4), Art.6(5) and Art.9(1)of Commission Regulation No 1089/2010.

c) **Test Method:** Examine whether the value type of each provided attribute or association role adheres to the corresponding value type specified in the target specification.

**NOTE 1** This test comprises testing the value types of INSPIRE identifiers, the value types of attributes and association roles that should be taken from enumeration and code lists, and the coverage domains.

**NOTE 2** Further technical information is in the Feature catalogue and UML diagram of the application schema(s) in section 5.2.

## A.1.3 Value test

a) **Purpose:** Verify whether all attributes or association roles whose value type is a code list or enumeration take the values set out therein.

b) **Reference:** Art.4 (3) of Commission Regulation No 1089/2010.

c) **Test Method:** When an attribute / association role has an enumeration or code list as its type, compare the values of each instance with those provided in the application schema. To pass this tests any instance of an attribute / association role

INSPIRE	Reference: INSPIRE_DataSpecification_AD_v3.1		
TWG-AD	INSPIRE Data Specification on <i>Addresses</i>	2014-04-17	Page 87

- shall not take any other value than defined in the enumeration table when its type is an enumeration.
- shall take only values explicitly specified in the code list when the code list's extensibility is "none".

**NOTE 1** This test is not applicable to code lists with extensibility "open" or "any".

**NOTE 2** When a data provider only uses code lists with narrower (more specific values) this test can be fully performed based on internal information.

# INSPIRE validácia - ATS datasety A1

## A.1.4 Attributes/associations completeness test

a) Purpose: Verification whether each instance of spatial object type and data types include all attributes and association roles as defined in the target application schema.

b) Reference: Art. 3, Art.4(1), Art.4(2), and Art.5(2) of Commission Regulation No 1089/2010.

c) Test Method: Examine whether all attributes and association roles defined for a spatial object type or data type are present for each instance in the dataset.

NOTE 1 Further technical information is in the Feature catalogue and UML diagram of the application schema(s) in section 5.2.

NOTE 2 For all properties defined for a spatial object, a value has to be provided if it exists in or applies to the real world entity – either the corresponding value (if available in the data set maintained by the data provider) or the value of *void*. If the characteristic described by the attribute or association role does not exist in or apply to the real world entity, the attribute or association role does not need to be present in the data set.

## A.1.5 Abstract spatial object test

a) Purpose: Verification whether the dataset does NOT contain abstract spatial object / data types defined in the target application schema(s).

b) Reference: Art.5(3) of Commission Regulation No 1089/2010

c) Test Method: Examine that there are NO instances of abstract spatial object / data types in the dataset provided.

NOTE Further technical information is in the Feature catalogue and UML diagram of the application schema(s) in section 5.2.

## A.1.6 Constraints test

a) Purpose: Verification whether the instances of spatial object and/or data types provided in the dataset adhere to the constraints specified in the target application schema(s).

b) Reference: Art. 3, Art.4(1), and Art.4(2) of Commission Regulation No 1089/2010.

c) Test Method: Examine all instances of data for the constraints specified for the corresponding spatial object / data type. Each instance shall adhere to all constraints specified in the target application schema(s).

## A.1.7 Geometry representation test

a) Purpose: Verification whether the value domain of spatial properties is restricted as specified in the Commission Regulation No 1089/2010.

b) Reference: Art.12(1), Annex II Section 5 of Commission Regulation No 1089/2010

c) Test Method: Check whether all spatial properties only use 0, 1 and 2-dimensional geometric objects that exist in the right 2-, 3- or 4-dimensional coordinate space, and where all curve interpolations respect the rules specified in the reference documents.

NOTE Further technical information is in OGC Simple Feature spatial schema v1.2.1 [06-103r4].

# INSPIRE validácia - ATS datasety A2

## A.2 Reference Systems Conformance Class

### Conformance class:

<http://inspire.ec.europa.eu/conformance-class/ir/ad/rs>

### A.2.1 Datum test

a) **Purpose:** Verify whether each instance of a spatial object type is given with reference to one of the (geodetic) datums specified in the target specification.

c) **Reference:** Annex II Section 1.2 of Commission Regulation No 1089/2010

b) **Test Method:** Check whether each instance of a spatial object type specified in the application schema(s) in section 5 has been expressed using:

- the European Terrestrial Reference System 1989 (ETRS89) within its geographical scope; or
- the International Terrestrial Reference System (ITRS) for areas beyond the ETRS89 geographical scope; or
- other geodetic coordinate reference systems compliant with the ITRS. Compliant with the ITRS means that the system definition is based on the definition of ITRS and there is a well-established and described relationship between both systems, according to the EN ISO 19111.

NOTE Further technical information is given in Section 6 of this document.

### A.2.3 View service coordinate reference system test

a) **Purpose:** Verify whether the spatial data set is available in the two dimensional geodetic coordinate system for their display with the INSPIRE View Service.

b) **Reference:** Annex II Section 1.4 of Commission Regulation 1089/2010

c) **Test Method:** Check that each instance of a spatial object types specified in the application schema(s) in section 5 is available in the two-dimensional geodetic coordinate system

NOTE Further technical information is given in Section 6 of this document.

### A.2.2 Coordinate reference system test

a) **Purpose:** Verify whether the two- and three-dimensional coordinate reference systems are used as defined in section 6.

b) **Reference:** Section 6 of Commission Regulation 1089/2010.

c) **Test Method:** Inspect whether the horizontal and vertical components of coordinates one of the corresponding coordinate reference system has been:

- Three-dimensional Cartesian coordinates based on a datum specified in 1.2 and using the parameters of the Geodetic Reference System 1980 (GRS80) ellipsoid.
- Three-dimensional geodetic coordinates (latitude, longitude and ellipsoidal height) based on a datum specified in 1.2 and using the parameters of the GRS80 ellipsoid.
- Two-dimensional geodetic coordinates (latitude and longitude) based on a datum specified in 1.2 and using the parameters of the GRS80 ellipsoid.
- Plane coordinates using the ETRS89 Lambert Azimuthal Equal Area coordinate reference system.

### A.2.4 Temporal reference system test

a) **Purpose:** Verify whether date and time values are given as specified in Commission Regulation No 1089/2010.

b) **Reference:** Art.11(1) of Commission Regulation 1089/2010

c) **Test Method:** Check whether:

- the Gregorian calendar is used as a reference system for date values;
- the Universal Time Coordinated (UTC) or the local time including the time zone as an offset from UTC are used as a reference system for time values.

NOTE Further technical information is given in Section 6 of this document.

### A.2.5 Units of measurements test

a) **Purpose:** Verify whether all measurements are expressed as specified in Commission Regulation No 1089/2010.

b) **Reference:** Art.12(2) of Commission Regulation 1089/2010

c) **Test Method:** Check whether all measurements are expressed in SI units or non-SI units accepted for use with the International System of Units.

NOTE 1 Further technical information is given in ISO 80000-1:2009.

# INSPIRE validácia - ATS datasety A3

## A.3.1 Unique identifier persistency test

a) **Purpose:** Verify whether the namespace and localId attributes of the external object identifier remain the same for different versions of a spatial object.

b) **Reference:** Art. 9 of Commission Regulation 1089/2010.

c) **Test Method:** Compare the namespace and localId attributes of the external object identifiers in the previous version(s) of the dataset with the namespace and localId attributes of the external object identifiers of current version for the same instances of spatial object / data types; To pass the test, neither the namespace, nor the localId shall be changed during the life-cycle of a spatial object.

NOTE 1 This test can be performed exclusively on the basis of the information available in the database of the data providers.

NOTE 2 When using URI this test includes the verification whether no part of the construct has been changed during the life cycle of the instances of spatial object / data types.

NOTE 3 Further technical information is given in section 14.2 of the INSPIRE Generic Conceptual Model.

## A.3.2 Version consistency test

a) **Purpose:** Verify whether different versions of the same spatial object / data type instance belong to the same type.

b) **Reference:** Art. 9 of Commission Regulation 1089/2010.

c) **Test Method:** Compare the types of different versions for each instance of spatial object / data type

NOTE 1 This test can be performed exclusively on the basis of the information available in the database of the data providers.

## A.3.3 Life cycle time sequence test

a) **Purpose:** Verification whether the value of the attribute beginLifespanVersion refers to an earlier moment of time than the value of the attribute endLifespanVersion for every spatial object / object type where this property is specified.

b) **Reference:** Art.10(3) of Commission Regulation 1089/2010.

c) **Test Method:** Compare the value of the attribute beginLifespanVersion with attribute endLifespanVersion. The test is passed when the beginLifespanVersion value is before endLifespanVersion value for each instance of all spatial object/data types for which this attribute has been defined.

## A.3.4 Validity time sequence test

a) **Purpose:** Verification whether the value of the attribute validFrom refers to an earlier moment of time than the value of the attribute validTo for every spatial object / object type where this property is specified.

b) **Reference:** Art.12(3) of Commission Regulation 1089/2010.

c) **Test Method:** Compare the value of the attribute validFrom with attribute validTo. The test is passed when the validFrom value is before validTo value for each instance of all spatial object/data types for which this attribute has been defined.

NOTE 1 This test can be performed exclusively on the basis of the information available in the database of the data providers.

## A.3.5 Update frequency test

a) **Purpose:** Verify whether all the updates in the source dataset(s) have been transmitted to the dataset(s) which can be retrieved for the AD data theme using INSPIRE download services.

b) **Reference:** Art.8 (2) of Commission Regulation 1089/2010.

c) **Test Method:** Compare the values of beginning of life cycle information in the source and the target datasets for each instance of corresponding spatial object / object types. The test is passed when the difference between the corresponding values is less than 6 months.

NOTE 1 This test can be performed exclusively on the basis of the information available in the database of the data providers.

# INSPIRE validácia - ATS datasety A4

## A.4 Metadata IR Conformance Class

### Conformance class:

<http://inspire.ec.europa.eu/conformance-class/ir/ad/md>

### A.4.1 Metadata for interoperability test

a) Purpose: Verify whether the metadata for interoperability of spatial data sets and services described in 1089/2010 Commission Regulation have been created and published for each dataset related to the AD data theme.

b) Reference: Art.13 of Commission Regulation 1089/2010

c) Test Method: Inspect whether metadata describing the coordinate reference systems, encoding and spatial representation type have been created and published. If the spatial data set contains temporal information that does not refer to the default temporal reference system, inspect whether metadata describing the temporal reference system have been created and published. If an encoding is used that is not based on UTF-8, inspect whether metadata describing the character encoding have been created.

NOTE Further technical information is given in section 8 of this document.

# INSPIRE validácia - ATS datasety A5,A6

## A.5 Information Accessibility Conformance Class

### Conformance class:

<http://inspire.ec.europa.eu/conformance-class/ir/ad/ia>

### A.5.1 CRS publication test

a) Purpose: Verify whether the identifiers and the parameters of coordinate reference system are published in common registers.

b) Reference: Annex II Section 1.5

c) Test method: Check whether the identifier and the parameter of the CRS used for the dataset are included in a register. .

NOTE Further technical information is given in section 6 of this document.

## A.6 Data Delivery Conformance Class

### Conformance class:

<http://inspire.ec.europa.eu/conformance-class/ir/ad/de>

### A.6.1 Encoding compliance test

a) Purpose: Verify whether the encoding used to deliver the dataset comply with EN ISO 19118.

b) Reference: Art.7 (1) of Commission Regulation 1089/2010.

c) Test Method: Follow the steps of the Abstract Test Suit provided in EN ISO 19118.

NOTE 1 Datasets using the default encoding specified in Section 9 fulfil this requirement.

NOTE 2 Further technical information is given in Section 9 of this document.

# INSPIRE validácia - ATS datasety A7

## A.7 Portrayal Conformance Class

### Conformance class:

<http://inspire.ec.europa.eu/conformance-class/ir/ad/po>

### A.8.1 Layer designation test

a) Purpose: verify whether each spatial object type has been assigned to the layer designated according to Commission Regulation 1089/2010.

b) Reference: Art. 14(1), Art14(2) and Annex II Section 5.6 .

c) Test Method: Check whether data is made available for the view network service using the specified layers respectively: AD.Address

NOTE Further technical information is given in section 11 of this document.

# INSPIRE validácia - ATS datasety A8

## A.8 Technical Guideline Conformance Class

### Conformance class:

<http://inspire.ec.europa.eu/conformance-class/tg/ad/3.1>

### A.8.1 Multiplicity test

a) **Purpose:** Verify whether each instance of an attribute or association role specified in the application schema(s) does not include fewer or more occurrences than specified in section 5.

c) **Reference:** Feature catalogue and UML diagram of the application schema(s) in section 5 of this guideline.

b) **Test Method:** Examine that the number of occurrences of each attribute and/or association role for each instance of a spatial object type or data type provided in the dataset corresponds to the number of occurrences of the attribute / association role that is specified in the application schema(s) in section 5.

### A.9.1 CRS http URI test

a) **Purpose:** Verify whether the coordinate reference system used to deliver data for INSPIRE network services has been identified by URIs according to the EPSG register.

c) **Reference:** Table 2 in Section 6 of this technical guideline

b) **Test Method:** Compare the URI of the dataset with the URIs in the table.

NOTE 1 Passing this test implies the fulfilment of test A6.2

NOTE 2 Further reference please see <http://www.epsg.org/geodetic.html>

### A.9.2 Metadata encoding schema validation test

a) **Purpose:** Verify whether the metadata follows an XML schema specified in ISO/TS 19139.

c) **Reference:** Section 8 of this technical guideline, ISO/TS 19139

b) **Test Method:** Inspect whether provided XML schema is conformant to the encoding specified in ISO 19139 for each metadata instance.

NOTE 1 Section 2.1.2 of the Metadata Technical Guidelines discusses the different ISO 19139 XML schemas that are currently available.

### A.9.3 Metadata occurrence test

a) **Purpose:** Verify whether the occurrence of each metadata element corresponds to those specified in section 8.

c) **Reference:** Section 8 of this technical guideline

### A.9.4 Metadata consistency test

a) **Purpose:** Verify whether the metadata elements follow the path specified in ISO/TS 19139.

c) **Reference:** Section 8 of this technical guideline, ISO/TS 19139

b) **Test Method:** Compare the XML schema of each metadata element with the path provide in ISO/TS 19137.

NOTE 1 This test does not apply to the metadata elements that are not included in ISO/TS 19139.

### A.9.5 Encoding schema validation test

a) **Purpose:** Verify whether the provided dataset follows the rules of default encoding specified in section 9 of this document

c) **Reference:** section 9 of this technical guideline

b) **Test Method:** Inspect whether provided encoding(s) is conformant to the encoding(s) for the relevant application schema(s) as defined in section 9:

NOTE 1 Applying this test to the default encoding schema described in section 9 facilitates testing conformity with the application schema specified in section 5. In such cases running this test with positive result may replace tests from A1.1 to A1.4 provided in this abstract test suite.

NOTE 2 Using Schematron or other schema validation tool may significantly improve the validation process, because some some complex constraints of the schema cannot be validated using the simple XSD validation process. On the contrary to XSDs Schematron rules are not delivered together with the INSPIRE data specifications. Automating the process of validation (e.g. creation of Schematron rules) is therefore a task and an opportunity for data providers.

# INSPIRE validácia - ATS datasety A8

## A.9.6 Style test

a) Purpose: Verify whether the styles defined in section 11.2 have been made available for each specified layer.

b) Reference: section 11.2.

c) Test Method: Check whether the styles defined in section 11.2 have been made available for each specified layer.

The screenshot displays a GitHub repository page for the file `ets-repository / metadata / 2.0 / common / ets-md-common-bsxets.xml`. The page shows the file's metadata, including 1205 lines, 1173 sloc, and 107 KB. The XML content is displayed in a code editor with line numbers 1 through 33. The XML structure includes a root element `<?xml version="1.0" encoding="utf-8"?>`, followed by `<ExecutableTestSuite>` with various attributes. The `<description>` element contains text about reporting issues and limitations. The `<tags>` element includes a tag with a reference. The `<testDriver>` and `<translationTemplateBundle>` elements are also present. The `<parameterList>` element contains two parameters: `encoding` and `files_to_test`.

## INSPIRE referenčný validátor

**INSPIRE Reference Validator**

[Home](#)
[Test selection](#)
[Test reports](#)
[Get support](#)
[More on the INSPIRE Reference Validator](#)

### Welcome to the INSPIRE Reference Validator

The purpose of the INSPIRE Reference Validator is to help data providers, solution providers and national coordinators to check whether data sets, network services and metadata meet the requirements defined in the INSPIRE Technical Guidelines. The Validator provides detailed test reports to help implementers understand how well their data, services, metadata or software solutions are doing (or where improvements may be needed).

The Validator is based on the Abstract and Executable Test Suites agreed between Member States and the Commission in the INSPIRE Maintenance and Implementation Group, and includes a helpdesk to address feedback, bug reports and feature requests from the INSPIRE community. See the changelog of the current and past releases and the release planning strategy for the plan of future releases of the INSPIRE Reference Validator.

The Validator has been developed under [ARE3NA](#) and [ELISE](#) Actions of the ISA/ISA2 Programmes.

**Test your data, services or metadata**

Pick your resource (data, services or metadata), select the test(s) to launch and check the results to see how well you are doing (or where you need to improve).

[Start a test](#)

**API**

If you are a developer, you can access and call the operations of the validator API to power your own applications.

[Try the API](#)

**Want more?**

Download the software, deploy it in your own infrastructure and customise it to fit your specific needs.

[Get the software](#)

**Feedback**

Use the Community space to provide your feedback or proposals on the ATS, ETS or the ETF test framework.

[Provide your feedback](#)

## INSPIRE linkage checker

**Resource linkages checker tool**

Emulate the checks by the INSPIRE Geoportal

This application may be used by INSPIRE data and service providers to emulate the checks executed by the INSPIRE Geoportal during its harvesting process. It reports potential issues, related to correctly established MD linkages among MS resources (Data set, View and Download services) identified during the harvesting, when the Geoportal is extracting and enriching the MD information found in the MS resources.

[Click here](#) for the detailed documentation about this process.

**Check new metadata**

Use this option if you want to check a newly created metadata record

**Check existing metadata**

Use this option if you want to check a metadata record that is already available through the INSPIRE Geoportal

**Data (Set or Series) metadata**

Select the input type and paste your content inside the text area:

URL to INSPIRE metadata

INSPIRE metadata XML content

**View Service metadata**

Select the input type and paste your content inside the text area:

URL to INSPIRE metadata

INSPIRE metadata XML content

**Download Service metadata**

Select the input type and paste your content inside the text area:

URL to INSPIRE metadata

INSPIRE metadata XML content
